

# Adding Item Quantity Inquiry to Item Code Lookup

## Versions 7.4 and forward

One of the biggest requirements of any information system is to allow the user to quickly access information. Sage Pro has been providing more and more tools with every release. Here's a great trick to add item quantity inquiry to any item code lookup or data driller. This suggestion works with versions 7.4 and forward.

Let's say you are entering a sales order, and want to inquire on details of the current availability of an item. This would mean you need to easily view open sales orders (customer demand), open purchase orders (current supply), or open work orders (internal supply and component demand). With drill-down to the item master, you can see each of these with a separate inquiry. Sage Pro now has the Item Quantities View. Here's how to attach it to a data driller or item field.

- Load Sage Pro ERP and go to System Manager,
- Load Drill Down screen (SM / Maintain / Drill Down)
- Select ITEM drill down
- Click on Assign Task
- Click on Select and add a new task
- Seq No – 6
- Description – Quantity Inquiry
- Type – Form
- Application – IC
- Copy & Paste the following script found on the next page in the Setup Script and save the details

This Sage Software product is licensed to: Gilbert & Associates

\*\*\*\*\*

LPARAMETERS pc\_compid, pc\_applid, pc\_ItemNo

WITH g\_newobj("cntCallIcinq", "ic\ibase")

.m\_Reset()

\*-- Set parameter values

.pc\_Item = pc\_ItemNo

.pc\_Title = "Item Quantities Inquiry for Item " + pc\_ItemNo

.pn\_HelpTag = SY\_M\_ITEM

.sl\_Modal = .t.

.sc\_ApplID = "IC"

.sc\_CompID = gc\_CompID

.m\_Run()

ENDWITH

\*\*\*\*\*

Now go to any screen that uses item (Sale Order, AR Invoices, Change Void SO, etc) and after selecting the item:

- Right click Item (text box)
- Select Drill Down
- Notice the new Quantity Inquiry option and click on it.
